

Mobile Recording Unit 2

Genelec 1038B coupled with 1070A makes this a suitable tour bus unit for recording vocals and small music productions. Yamaha newest near field monitors were also included in this system. This unit hosts a digidesign C24 and protocols HD4 protocols rig.

This unit also houses the avalon 737 mic pre and apogee converter for clean vocal to protocols sound. The blue berry microphone by B.L.U.E. is a great mic for recording vocals and acoustic guitars.

Tie lines in the vocal booth offer interconnectivity from control room and two guitar lines directly connect to c24 console for ease of use

Console

Digidesign C24 (16 mic/line input)
